Full Stack Web Development Engineer/API Specialist

Projects

Sights & Sounds | Rutgers University Full Stack Boot Camp API Developer

- Conceived and developed a web application designed to empower users with the ability to access real-time events, ranging from Sporting Events to Concerts and Art Shows, via the Ticket Masters API. Additionally, the application seamlessly mapped users to these events using the Google Maps API.
- Pioneered collaborative teamwork within this project, effectively delegating roles based on team members' proficiencies. Personally, I demonstrated my prowess in API implementation into backend code, skillfully merging it with my JavaScript knowledge to initialize map functions and create comprehensive functionality with the two utilized APIs.

- [Deployed Link](<https://reallyawesomename.github.io/room-for-activities/>)

Achievement Unlocked | Rutgers University Full Stack Boot Camp API Developer

- Conceived and executed a community-centric platform catering to individuals sharing a profound passion for video games and a desire to exchange accolades and statistics through a blog-style forum.
- Assumed responsibility for the seamless integration of the Steam API, enabling the retrieval of user profiles and statistics upon website login. This endeavor also encompassed CSS styling and the establishment of a robust backend server utilizing npm and Node.js.

Cinema Stash | Rutgers University Full Stack Coding Boot Camp API Developer/Front End Specialist

- Spearheaded the development of an application designed to cater to cinephiles by allowing them to register, sign in, and conveniently search for their favorite movies. Moreover, users could curate their movie lists for future viewing.
- Assumed a pivotal role in styling, utilizing CSS, and successfully integrated the IMDb movie API. Additionally, I proactively resolved deployment challenges associated with React and GitHub Pages.
